

Correction: Nurse home visiting and prenatal substance use in a socioeconomically disadvantaged population in British Columbia: analysis of prenatal secondary outcomes in an ongoing randomized controlled trial

In an article published Oct. 27, 2020,¹ Table 1 incorrectly stated that a score of 7 or more was used as the criterion for exposure to intimate partner violence (IPV). It should have stated that a score of 3 or more was used to report the IPV numbers.

The article has been corrected at cmajopen.ca.
