General comments (author response in bold)	<p>Introduction too long, need to summarize</p> <p>In Methods, "A modified Dillman approach was used..." Why?</p> <p>In Data Analysis, you should explain the questionnaires, how the knowledge was measured</p> <p>In Discussion, 1st line, there is no need to repeat the aim of the study</p> <p>In Conclusion, please summarize; it is too long</p> <p>Tables 1 and 3 are unnecessary; delete</p> <p>Table 4, column 2: why only 2 options, what if they don't agree?</p> <p>Thank you Dr. Hasnain Faisal Ghazi for reviewing our manuscript and providing us your feedback. Most of the comments made in the PDF file have been noted by the editor as well. We have addressed the comments</p>

General comments (author response in bold)	<p>As a Family Physician I enjoyed reading your manuscript. I have little knowledge about pediatric dentistry and found your paper to be well written, educational, and to spike my interest to learn more. I would urge you to prepare a paper, aimed at the education of primary care providers about children's oral health, for a journal such as CMAJ or the Canadian Family Physician or a Canadian pediatrics journal.</p> <p>I found your methods and analysis to be appropriate.</p>
