STROBE Statement—Checklist of items that should be included in reports of *cross-sectional studies*

	Item No	Recommendation	Pag No
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	1
		(b) Provide in the abstract an informative and balanced summary of what was	
		done and what was found	3
Introduction			•
Background/rationale	2	Explain the scientific background and rationale for the investigation being reported	5-6
Objectives	3	State specific objectives, including any prespecified hypotheses	6
Methods			
Study design	4	Present key elements of study design early in the paper	6
Setting	5	Describe the setting, locations, and relevant dates, including periods of	
		recruitment, exposure, follow-up, and data collection	6-7
Participants	6	(a) Give the eligibility criteria, and the sources and methods of selection of	
1 articipants	Ü	participants	7
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders,	
	,	and effect modifiers. Give diagnostic criteria, if applicable	8
Data sources/	8*	For each variable of interest, give sources of data and details of methods of	
	o	assessment (measurement). Describe comparability of assessment methods	8-9
measurement		if there is more than one group	0-2
Bias	9	Describe any efforts to address potential sources of bias	7,9
Study size	10	Explain how the study size was arrived at	7,5
Quantitative	11	Explain how the study size was arrived at Explain how quantitative variables were handled in the analyses. If	/
variables	11	· · · · · · · · · · · · · · · · · · ·	NA
	12	applicable, describe which groupings were chosen and why	
Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding	9
		(b) Describe any methods used to examine subgroups and interactions	NA
		(c) Explain how missing data were addressed	9
		(d) If applicable, describe analytical methods taking account of sampling	NA
		strategy	
		(\underline{e}) Describe any sensitivity analyses	NA
Results	124		
Participants Descriptive data	13*	(a) Report numbers of individuals at each stage of study—eg numbers	10
		potentially eligible, examined for eligibility, confirmed eligible, included in	10
		the study, completing follow-up, and analysed	
		(b) Give reasons for non-participation at each stage	10
		(c) Consider use of a flow diagram	25
	14*	(a) Give characteristics of study participants (eg demographic, clinical,	10-1
		social) and information on exposures and potential confounders	26
		(b) Indicate number of participants with missing data for each variable of interest	NA
Outcome data	15*	Report numbers of outcome events or summary measures	11
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted	
	-	estimates and their precision (eg, 95% confidence interval). Make clear	11
		which confounders were adjusted for and why they were included	

		(b) Report category boundaries when continuous variables were categorized	NA
		© If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period	NA
Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses	NA
Discussion			
Key results	18	Summarise key results with reference to study objectives	11-12
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias	14-15
		or imprecision. Discuss both direction and magnitude of any potential bias	
Interpretation	20	Give a cautious overall interpretation of results considering objectives,	
		limitations, multiplicity of analyses, results from similar studies, and other	11-15
		relevant evidence	
Generalisability	21	Discuss the generalisability (external validity) of the study results	14-15
Other information			
Funding	22	Give the source of funding and the role of the funders for the present study	16
		and, if applicable, for the original study on which the present article is based	

^{*}Give information separately for exposed and unexposed groups.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.
