STROBE Statement—checklist of items that should be included in reports of observational studies

	Item No	Recommendation	Page/section in paper
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	Page 1/Title
		(b) Provide in the abstract an informative and balanced summary of	Page 2/
		what was done and what was found	Abstract
Introduction			
Background/rationale	2	Explain the scientific background and rationale for the investigation	Page 3/
	_	being reported	Introduction
Objectives	3	State specific objectives, including any prespecified hypotheses	Page 4/Introduction
Methods			
Study design	4	Present key elements of study design early in the paper	Pages 4,5/Methods
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection	Pages 4,5/Methods
Participants	6	(a) Cohort study—Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up Case-control study—Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls Cross-sectional study—Give the eligibility criteria, and the sources and methods of selection of participants	Pages 4,5/Methods
		(b) Cohort study—For matched studies, give matching criteria and number of exposed and unexposed Case-control study—For matched studies, give matching criteria and the number of controls per case	Not applicable
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable	Pages 4,5/Methods
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group	Pages 4,5/Methods
Bias	9	Describe any efforts to address potential sources of bias	Pages 4,5/Methods
Study size	10	Explain how the study size was arrived at	Pages 4,5/Methods
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	Pages 4,5/Methods
Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding	Pages 5,6/Methods
		(b) Describe any methods used to examine subgroups and interactions	Pages 5,6/Methods
		(c) Explain how missing data were addressed	Not applicable

(d) Cohort study—If applicable, explain how loss to follow-up was	Not
addressed	applicable
Case-control study—If applicable, explain how matching of cases and	
controls was addressed	
Cross-sectional study—If applicable, describe analytical methods	
taking account of sampling strategy	
(e) Describe any sensitivity analyses	Not
	applicable

Continued on next page

Results			
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers	Page 6/Results
		potentially eligible, examined for eligibility, confirmed eligible,	
		included in the study, completing follow-up, and analysed	
		(b) Give reasons for non-participation at each stage	Not applicable
		(c) Consider use of a flow diagram	Not applicable
Descriptive	14*	(a) Give characteristics of study participants (eg demographic, clinical,	Page 6/Results
data		social) and information on exposures and potential confounders	
		(b) Indicate number of participants with missing data for each variable	Not applicable
		of interest	
		(c) Cohort study—Summarise follow-up time (eg, average and total	Not applicable
		amount)	
Outcome data	15*	Cohort study—Report numbers of outcome events or summary	Page 6/Results
		measures over time	
		Case-control study—Report numbers in each exposure category, or	Not applicable
		summary measures of exposure	
		Cross-sectional study—Report numbers of outcome events or summary	Not applicable
		measures	
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted	Page 7/Results
		estimates and their precision (eg, 95% confidence interval). Make clear	
		which confounders were adjusted for and why they were included	
		(b) Report category boundaries when continuous variables were	Page 7/Results
		categorized	
		(c) If relevant, consider translating estimates of relative risk into	Not applicable
		absolute risk for a meaningful time period	
Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions,	Pages 7, 8/Results
		and sensitivity analyses	
Discussion			
Key results	18	Summarise key results with reference to study objectives	Page
			8/Interpretation
Limitations	19	Discuss limitations of the study, taking into account sources of	Pages
		potential bias or imprecision. Discuss both direction and magnitude of	9,10/Interpretation
		any potential bias	
Interpretation	20	Give a cautious overall interpretation of results considering objectives,	Page
		limitations, multiplicity of analyses, results from similar studies, and	11/Interpretation
		other relevant evidence	
Generalisability	21	Discuss the generalisability (external validity) of the study results	Pages
			8,9/Interpretation
Other informati	ion		
Funding	22	Give the source of funding and the role of the funders for the present	Not applicable
		study and, if applicable, for the original study on which the present	
		article is based	

^{*}Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.
