STROBE Statement-checklist of items that should be included in reports of observational studies

	Item No	Recommendation		
Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	Page	1
		(b) Provide in the abstract an informative and balanced summary of what was done		
		and what was found	Page	3
Introduction			_	
Background/rationale	2	Explain the scientific background and rationale for the investigation being reported	_ Page	4
Objectives	3	State specific objectives, including any prespecified hypotheses	 Page	4
Methods			_	
Study design	4	Present key elements of study design early in the paper	_ Page	5
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment,	 Page	
		exposure, follow-up, and data collection	_	-
Participants	6	(a) Cohort study—Give the eligibility criteria, and the sources and methods of	Page	5
		selection of participants. Describe methods of follow-up		-
		<i>Case-control study</i> —Give the eligibility criteria, and the sources and methods of		
		case ascertainment and control selection. Give the rationale for the choice of cases		
		and controls		
		Cross-sectional study—Give the eligibility criteria, and the sources and methods of		
		selection of participants	_	
		(b) Cohort study—For matched studies, give matching criteria and number of		
		exposed and unexposed		
		Case-control study—For matched studies, give matching criteria and the number of		
		controls per case		
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect		_
		modifiers. Give diagnostic criteria, if applicable Page 5,	_ 6, '	/
Data sources/	8*	For each variable of interest, give sources of data and details of methods of		
measurement		assessment (measurement). Describe comparability of assessment methods if there		
		is more than one group Page 5,	6,	7
Bias	9	Describe any efforts to address potential sources of bias	Page	7
Study size	10	Explain how the study size was arrived at	N/A	
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable,		
		describe which groupings were chosen and why		
Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding	Page	e 7
		(b) Describe any methods used to examine subgroups and interactions		
		(c) Explain how missing data were addressed		
		(d) Cohort study—If applicable, explain how loss to follow-up was addressed		
		<i>Case-control study</i> —If applicable, explain how matching of cases and controls was		
		addressed		
		Cross-sectional study—If applicable, describe analytical methods taking account of		
		sampling strategy		
		( <u>e</u> ) Describe any sensitivity analyses	_ Page	8

Results			
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, Pa	age
		examined for eligibility, confirmed eligible, included in the study, completing follow-up, and	
		analysed	
		(b) Give reasons for non-participation at each stage	
		(c) Consider use of a flow diagram	
Descriptive	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information	
data		on exposures and potential confounders Page 8, Tak	ole
		(b) Indicate number of participants with missing data for each variable of interest	
		(c) Cohort study—Summarise follow-up time (eg, average and total amount)	_
Outcome data	15*	Cohort study—Report numbers of outcome events or summary measures over time age 8, To	able
		Case-control study-Report numbers in each exposure category, or summary measures of	
		exposure	
		Cross-sectional study—Report numbers of outcome events or summary measures	
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their	
		precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and	
		why they were included Page 8-9, Tab.	le :
		(b) Report category boundaries when continuous variables were categorized	
		( <i>c</i> ) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful	
		time period	
Other analyses	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity	
		analyses Page 8, Tab.	le
Discussion			
Key results	18	Summarise key results with reference to study objectives Page 9	
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision.	
		Discuss both direction and magnitude of any potential bias Page 11	
Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity	
Ĩ		of analyses, results from similar studies, and other relevant evidence Page 9, 1	LO,1
Generalisability	21	Discuss the generalisability (external validity) of the study results Page 11,	,12
Other informatio	n		
Other information	on 22	Give the source of funding and the role of the funders for the present study and, if applicable,	

\*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

**Note:** An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.
