

Appendix 5 (as supplied by the authors): Proportion of adults (secondary analysis) wearing protective equipment at the time of their traumatic brain injury hospitalization in the Terres-Cries-de-la-Baie-James.

Patient involved in a recreational accident (sports/cycling) were the most likely to wear protective equipment. Most patients involved in motor vehicle collisions (car) and all-terrain vehicle collisions did not wear protective equipment (seatbelts and helmets, respectively). No patients involved in snowmobile accidents wore a helmet.
