

## The Canadian Preterm Birth Network: a study protocol for improving outcomes for preterm infants and their families

STROBE Statement—checklist of items that should be included in reports of observational studies

	Item No	Recommendation
<b>Title and abstract</b>	1	(a) Indicate the study's design with a commonly used term in the title or the abstract <b>Found on p.1 in title</b> (b) Provide in the abstract an informative and balanced summary of what was done and what was found <b>Found on p. 3 in abstract</b>
<b>Introduction</b>		
Background/rationale	2	Explain the scientific background and rationale for the investigation being reported <b>Found on p. 4 in introduction</b>
Objectives	3	State specific objectives, including any prespecified hypotheses <b>Found on p. 4-5 in introduction</b>
<b>Methods</b>		
Study design	4	Present key elements of study design early in the paper <b>Found on p. 5 in methods</b>
Setting	5	Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection <b>Found on p. 5 in methods</b>
Participants	6	(a) <i>Cohort study</i> —Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up <b>Found on p. 6 in methods</b> <i>Case-control study</i> —Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls <i>Cross-sectional study</i> —Give the eligibility criteria, and the sources and methods of selection of participants (b) <i>Cohort study</i> —For matched studies, give matching criteria and number of exposed and unexposed <i>Case-control study</i> —For matched studies, give matching criteria and the number of controls per case
Variables	7	Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable paper <b>Found on p. 7 methods, p. 7-12 in sections Cluster 1, cluster 2 and cluster 3.</b>
Data sources/ measurement	8*	For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group <b>Found on p. 7 in methods and appendix 1.</b>
Bias	9	Describe any efforts to address potential sources of bias <b>Found in appendix 1</b>
Study size	10	Explain how the study size was arrived at <b>Found on p. 7 in methods</b>
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why <b>Found in appendix 1, TBD</b>
Statistical methods	12	(a) Describe all statistical methods, including those used to control for confounding <b>Found in appendix 1, TBD</b> (b) Describe any methods used to examine subgroups and interactions <b>Found in appendix 1, TBD</b> (c) Explain how missing data were addressed <b>Found in appendix 1, TBD</b>

(d) *Cohort study*—If applicable, explain how loss to follow-up was addressed **TBD**  
*Case-control study*—If applicable, explain how matching of cases and controls was addressed  
*Cross-sectional study*—If applicable, describe analytical methods taking account of sampling strategy

---

(e) Describe any sensitivity analyses

Continued on next page

<b>Results</b>		
Participants TBD	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed (b) Give reasons for non-participation at each stage (c) Consider use of a flow diagram
Descriptive data TBD	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders (b) Indicate number of participants with missing data for each variable of interest (c) <i>Cohort study</i> —Summarise follow-up time (eg, average and total amount)
Outcome data TBD	15*	<i>Cohort study</i> —Report numbers of outcome events or summary measures over time <i>Case-control study</i> —Report numbers in each exposure category, or summary measures of exposure <i>Cross-sectional study</i> —Report numbers of outcome events or summary measures
Main results TBD	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included (b) Report category boundaries when continuous variables were categorized (c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period
Other analyses TBD	17	Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses

## Discussion

Key results	18	Summarise key results with reference to study objectives <b>Found on p.13 Interpretation and conclusion</b>
Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias <b>TBD</b>
Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence <b>TBD</b>
Generalisability	21	Discuss the generalisability (external validity) of the study results objectives <b>Found on p.13 Interpretation and conclusion</b>

## Other information

Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based <b>Found on p.4 on introduction</b>
---------	----	---

\*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

**Note:** An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at <http://www.plosmedicine.org/>, Annals of Internal Medicine at <http://www.annals.org/>, and Epidemiology at <http://www.epidem.com/>). Information on the STROBE Initiative is available at [www.strobe-statement.org](http://www.strobe-statement.org).
